

Our Workato Partnership

A single platform for integration and workflow automation.

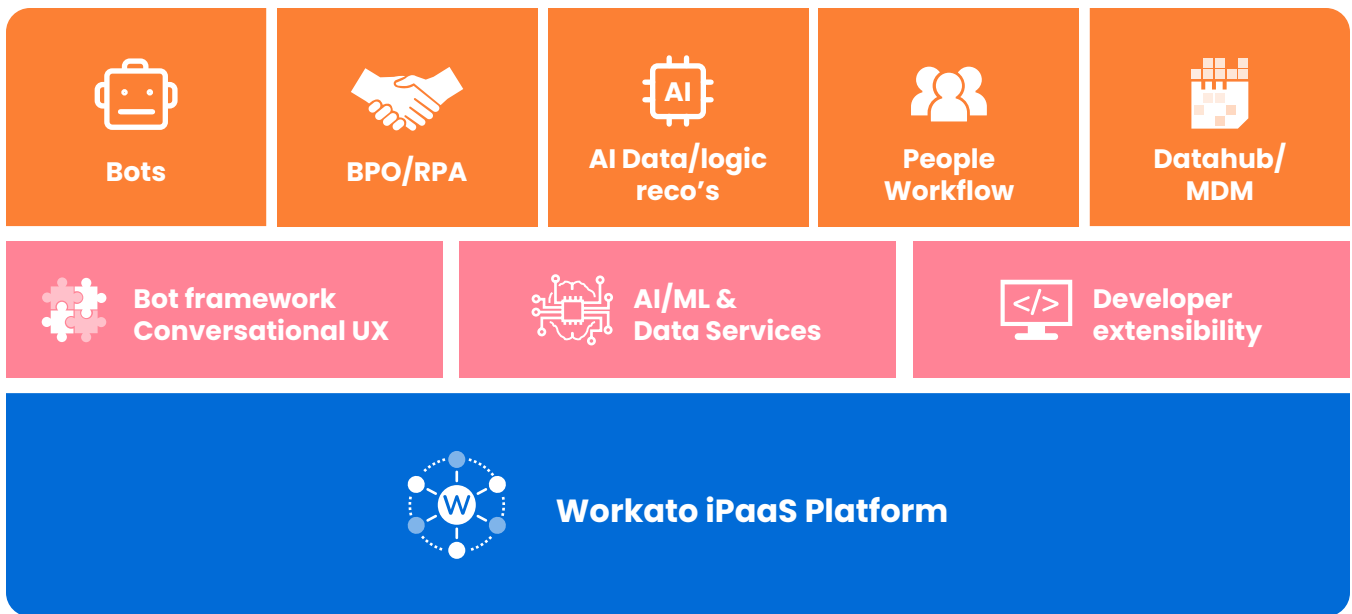

The digital economy presents organizations with the opportunity to break operational silos and gain visibility into all aspects of their business in real time—across applications, within processes and workflows on-premise, or on the cloud. This is precisely what Workato promises to do. It is **one platform for automation** across all use-cases, stakeholders, teams, and departments.

Workato provides a nextgen, low-code/no-code iPaaS integration platform powered by artificial intelligence (AI) and Machine Learning (ML) capabilities and leverages modern robotic process automation (RPA) for enterprise workflows. It also empowers both technical and business users to build smart, robust and flexible data pipelines that drive better outcomes with deep business insights.

Workato Advantage

The primary motive for businesses across industries to opt for automated integration platforms and solutions is to enhance organizational efficiency and project delivery, as well as speed up real-time insights. To make this a reality, Workato enables:

- **Business and IT teams** to build integrations at five times the speed of typical integration platforms, thanks to its low-code / no-code feature.
- **Automated workflows** by pulling data from multiple sources: applications, processes, databases, services and more, with 1000+ pre-built connectors for SaaS, database and ERP applications.
- **Technical and non-technical stakeholders** to easily address their requirements with 500,000+ ready-to-use “recipes” for common business processes.
- **Integration on public cloud infrastructure** from Google Cloud Platform (GCP) and Amazon Web Services (AWS).
- **Scaling**, while significantly minimizing operating costs and expenses.
- **Conversational UX (bots)** through 300+ pre-built integration flows for various SaaS products.
- **Industry-grade security and governance** for correct information structure, metrics, leadership, and guidance.

Blue Altair's Workato Service Offerings

We help businesses **improve productivity, boost time-to-value, build enterprise-grade platforms, and reduce cost.** We do this by designing and implementing their integrations, workflows and automation in Workato, all tailored specifically to their organization's needs.

We collaborate closely with our clients to understand their current and future automation state. Our unique consulting approach combines the business and technology aspects to create flexible, resilient automation solutions. Our pool of Workato certified professionals have deep technical expertise, and have engineered all of our accelerators that help in fast-forwarding automation projects. We help businesses with their automation journey through:

Flexible Programs

Assessment, design and strategy to build Automation as a Service

Blueprints

Robust, simple, low-code, feature-rich functionality-based integration design

Solutions

Customized industry solutions to accelerate digital automation transformation

Accelerators

Reusable frameworks and playbooks as well as starter kits with best practices, standards and guidelines for Workato strategy development

Services

Cloud integrations, application development, platform administration and support (including post implementation support and managed services)

Addressing Industry Problems with Workato

Today, most industries are looking at automation not just for speeding up business operations, but also to reduce operational spend by increasing efficiency for repetitive and manual tasks like customer onboarding, issue resolution and integration with other systems. They are also looking at ways to provide intuitive, seamless and improved customer experiences, and to comply with ever-changing regulations.

Blue Altair is enabling businesses across industries to achieve end-to-end digital transformation using AI-based automated intelligent solutions with Workato's no-code/low-code integration platform.

Our growing pool of Workato-certified experts help to:

- Architect highly scalable solutions as well as design, build, test and deploy new recipes for cloud systems integration with Workato for standardized business process automation.
- Accelerate time to market and reduce overall integration efforts by up to 30%, using our pre-built Workato catalog for enterprise systems.
- Build secure, robust and memory optimized Workato recipes for application integration that are efficient and easy to troubleshoot.
- Develop customizable workflows using Workbots that connect to critical business applications and bring the power of those services to a single collaboration interface like Slack or Microsoft Teams.
- Turn Workato's API recipes into endpoints that can be easily consumed from outside the Workato platform.
- Provide specialized managed services whereby Blue Altair manages Workato environments, grants secure access, troubleshoots issues, maintains and operates the Workato platform.

The most prominent benefits businesses can expect to see through our Workato services include speedy operations, increased collaboration and productivity, and seamless business operations.
